# A Basic Introduction to FRBR<sub>oo</sub> and PRESS<sub>oo</sub>

**Patrick Le Boeuf**

Performing Arts Department  
National Library of France, Paris, France

IFLA WLIC 2015, Cape Town, 20 August 2015

---

# Introduction

- IFLA FRBR Review Group
  - 2003: Working Group on FRBR/CRM Dialogue
- Outcome = an 'object-oriented formulation of FRBR': FRBR<sub>00</sub>
  - 2009: v. 1, 2013: v. 2
  - Admittedly...

# Introduction

---

- ISSN International Centre + National Library of France in 2013
    - What about continuing resources?
    - → 2014: PRESS<sub>00</sub> v. 1
    - An extension of FRBR<sub>00</sub> for continuing resources
-

---

FORMALISM  
USED IN FRBR<sub>00</sub>

---

# Formalism used in FRBR<sub>00</sub>

---

- Common pattern for FRBR, FRAD, and FRSAD Definitions:
    - User tasks
    - Entities
    - Attributes
    - Relationships
  - And in FRBR<sub>00</sub>?
-

# User Tasks

---

- None.
  - Implicit user tasks = ?
    - *Find*
    - *Explore*
    - *Trust*
-

# From entities to classes

- ‘Classes’

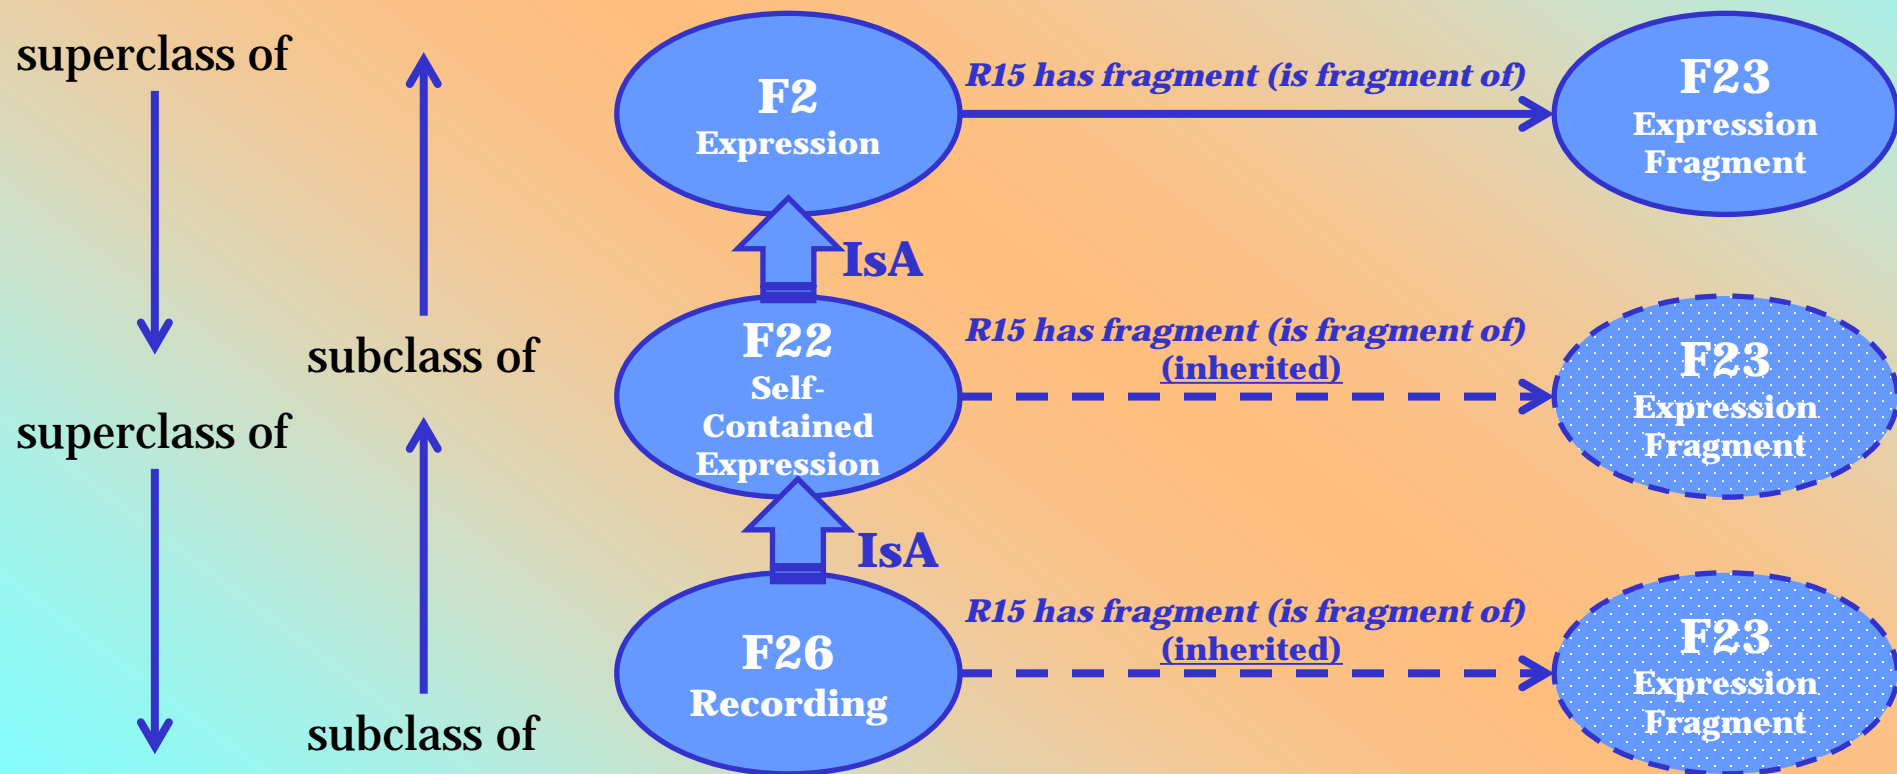

- ‘Instances’

- Labels for classes are not enough!  
Read the Scope Notes!

# From entities to classes

- Inheritance

# Attributes

---

- None.
  - All FR.. attributes are dealt with as class-to-class relationships
  - ➔ Many more classes in FRBR<sub>00</sub> than entities in FRBR/FRAD/FRSAD!
-

# From relationships to properties

---

Domain class

Property

Range class

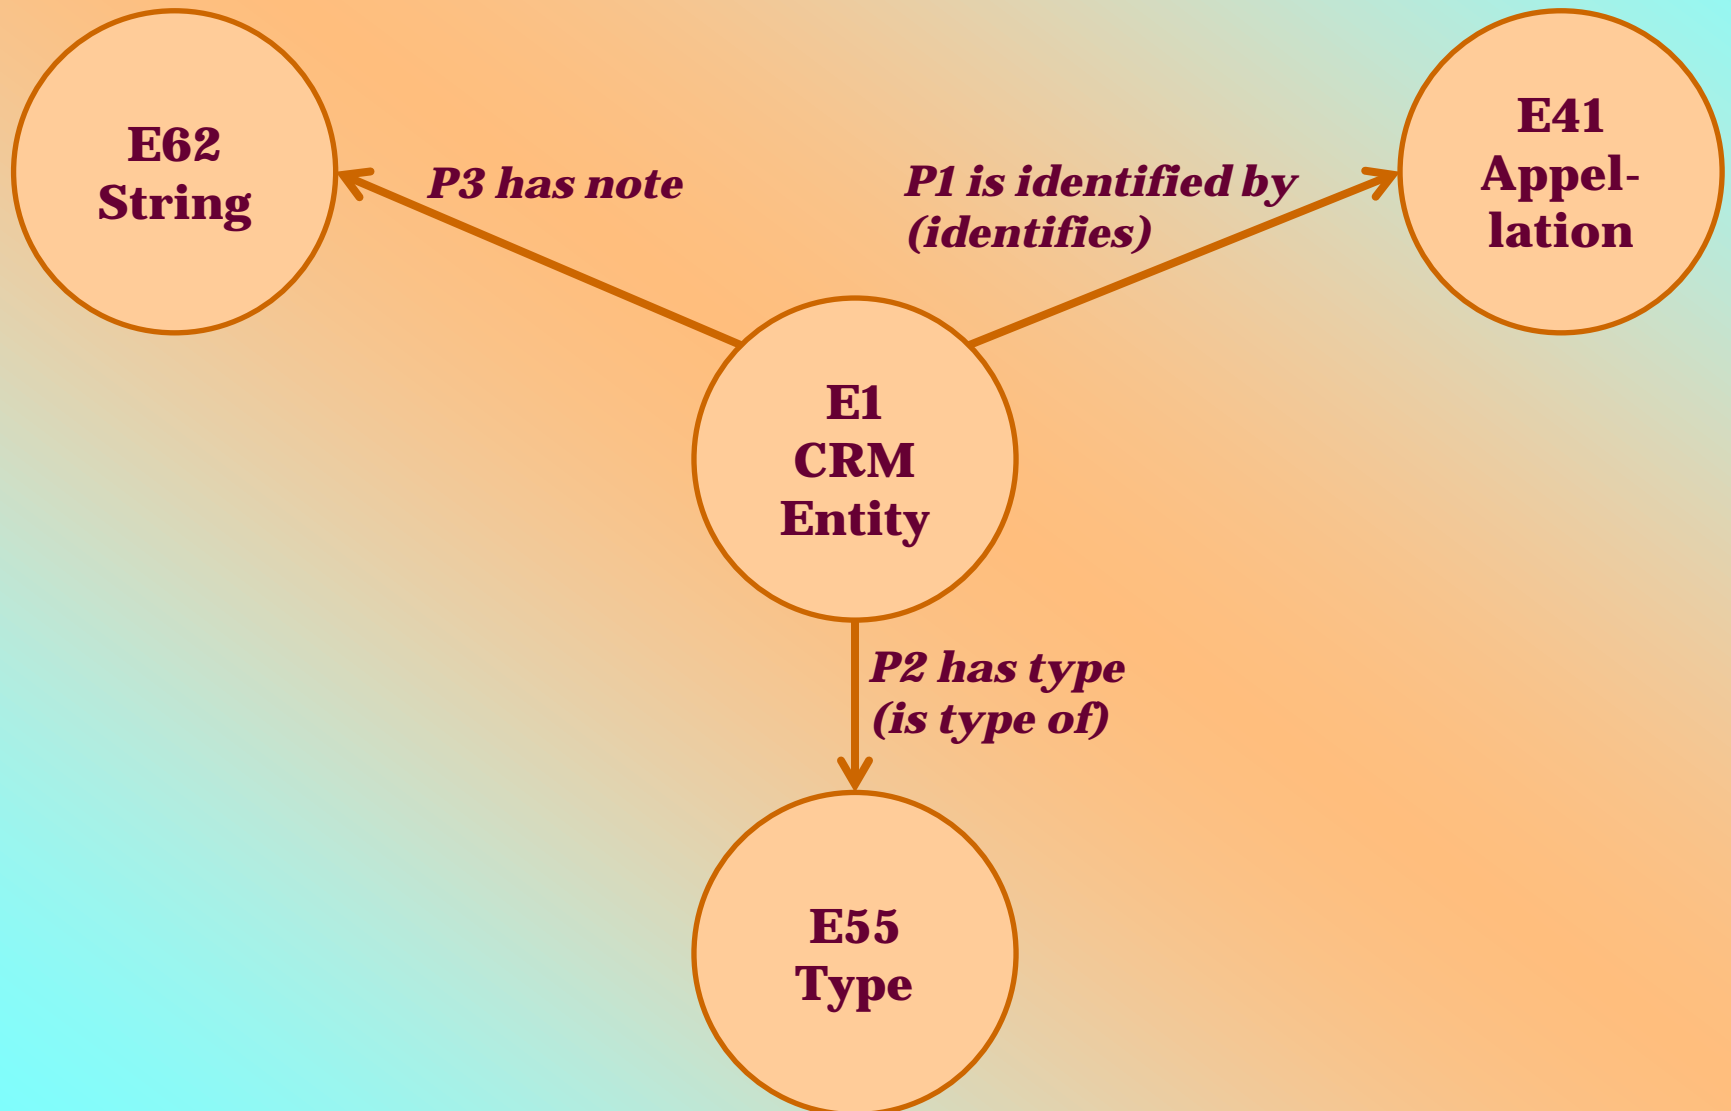

---

# FRBR<sub>00</sub> as an extension of CIDOC CRM

---

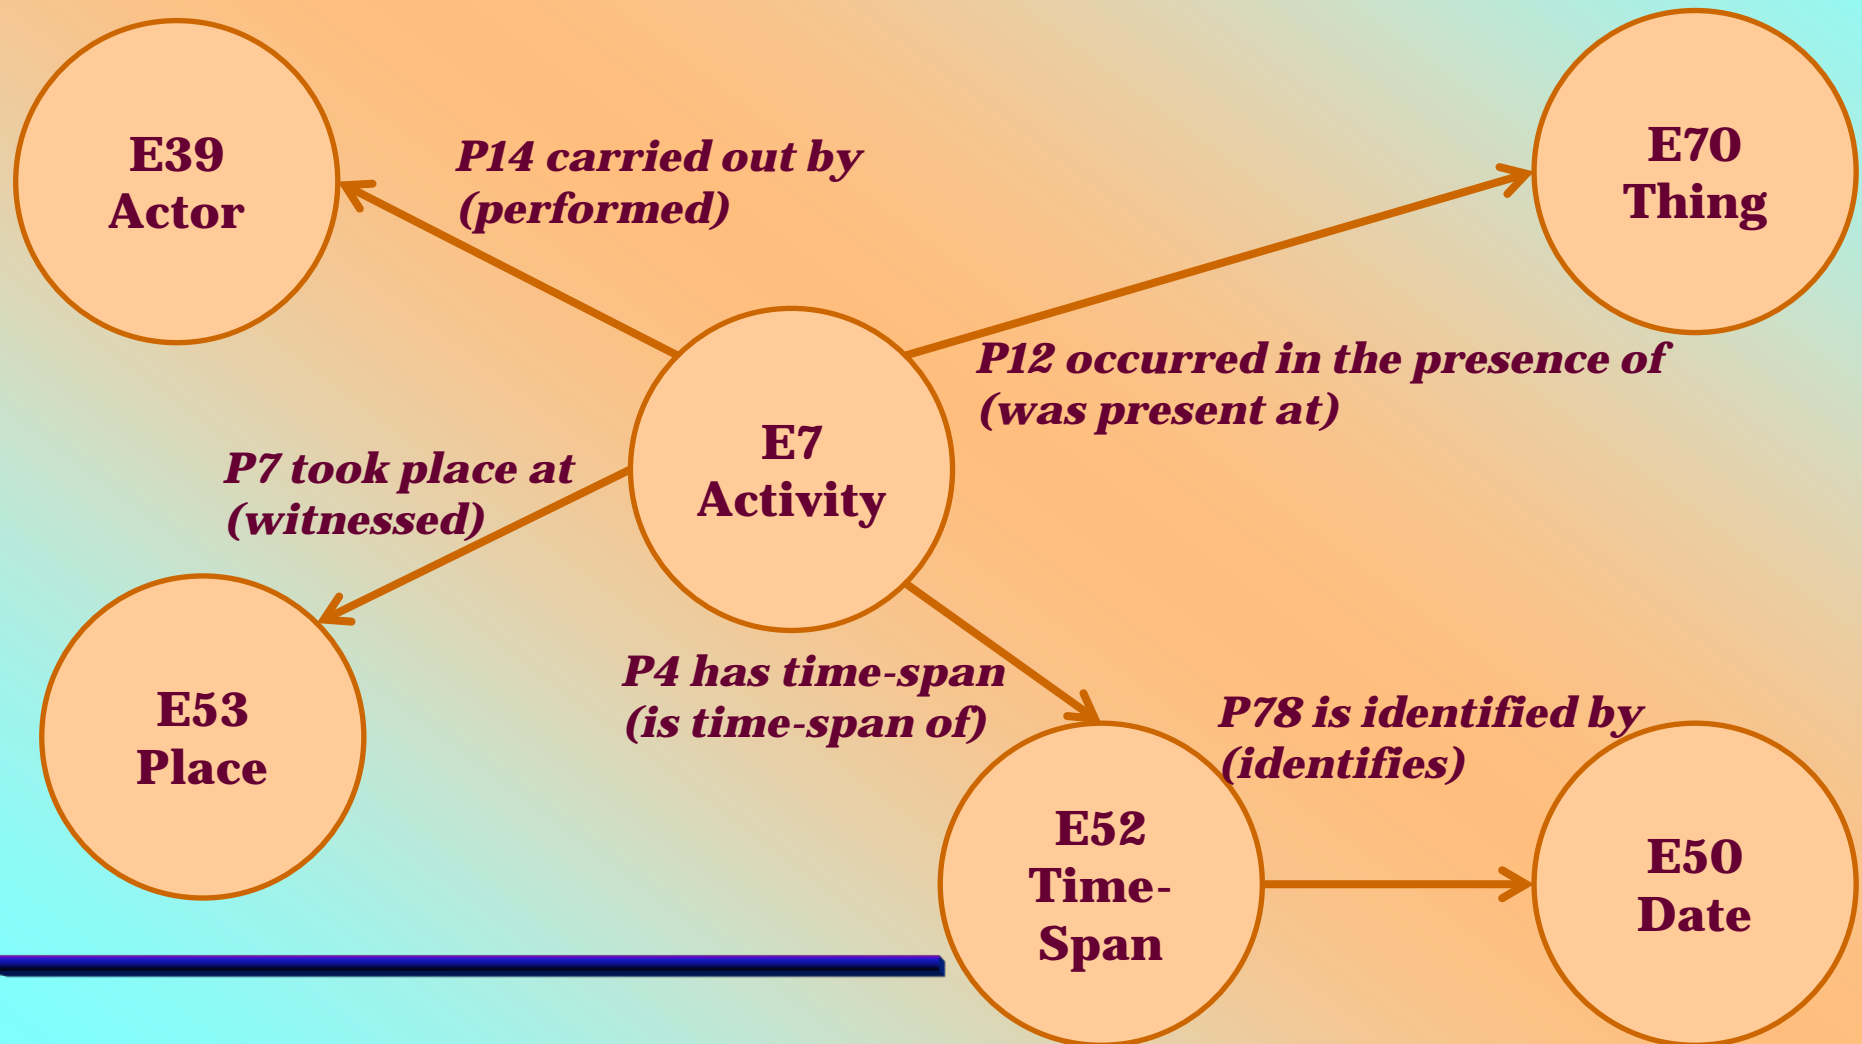

- CIDOC CRM = museum community's model
  - ICOM = International Council of Museums
  - CIDOC = International Committee for Documentation
  - CRM = Conceptual Reference Model
- FRBR<sub>00</sub> reuses some basic constructs from CIDOC CRM

# FRBR<sub>00</sub> as an extension of CIDOC CRM

# FRBR<sub>00</sub> as an extension of CIDOC CRM

---

---

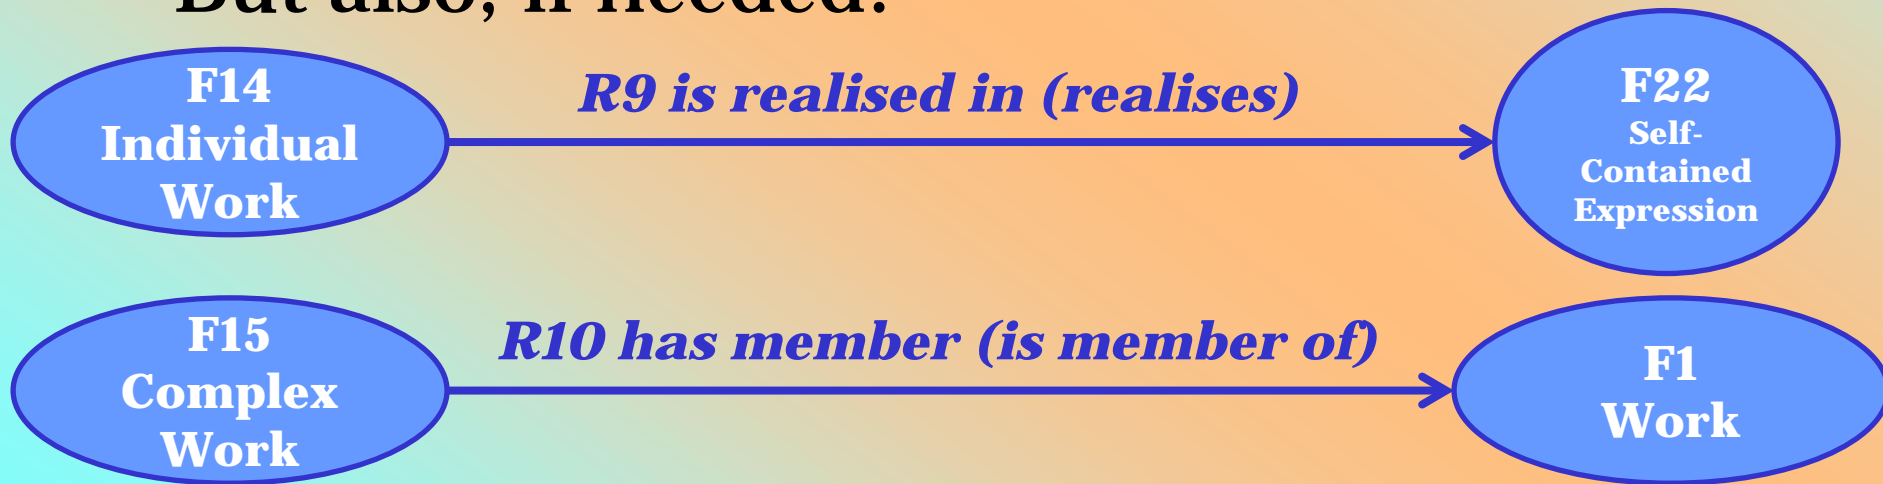

# HOW FRBR<sub>oo</sub> MODELS THE MAIN STRUCTURES OF FRBR/FRAD/FRSAD

---

# 'Work is realized through Expression'

- But also, if needed:

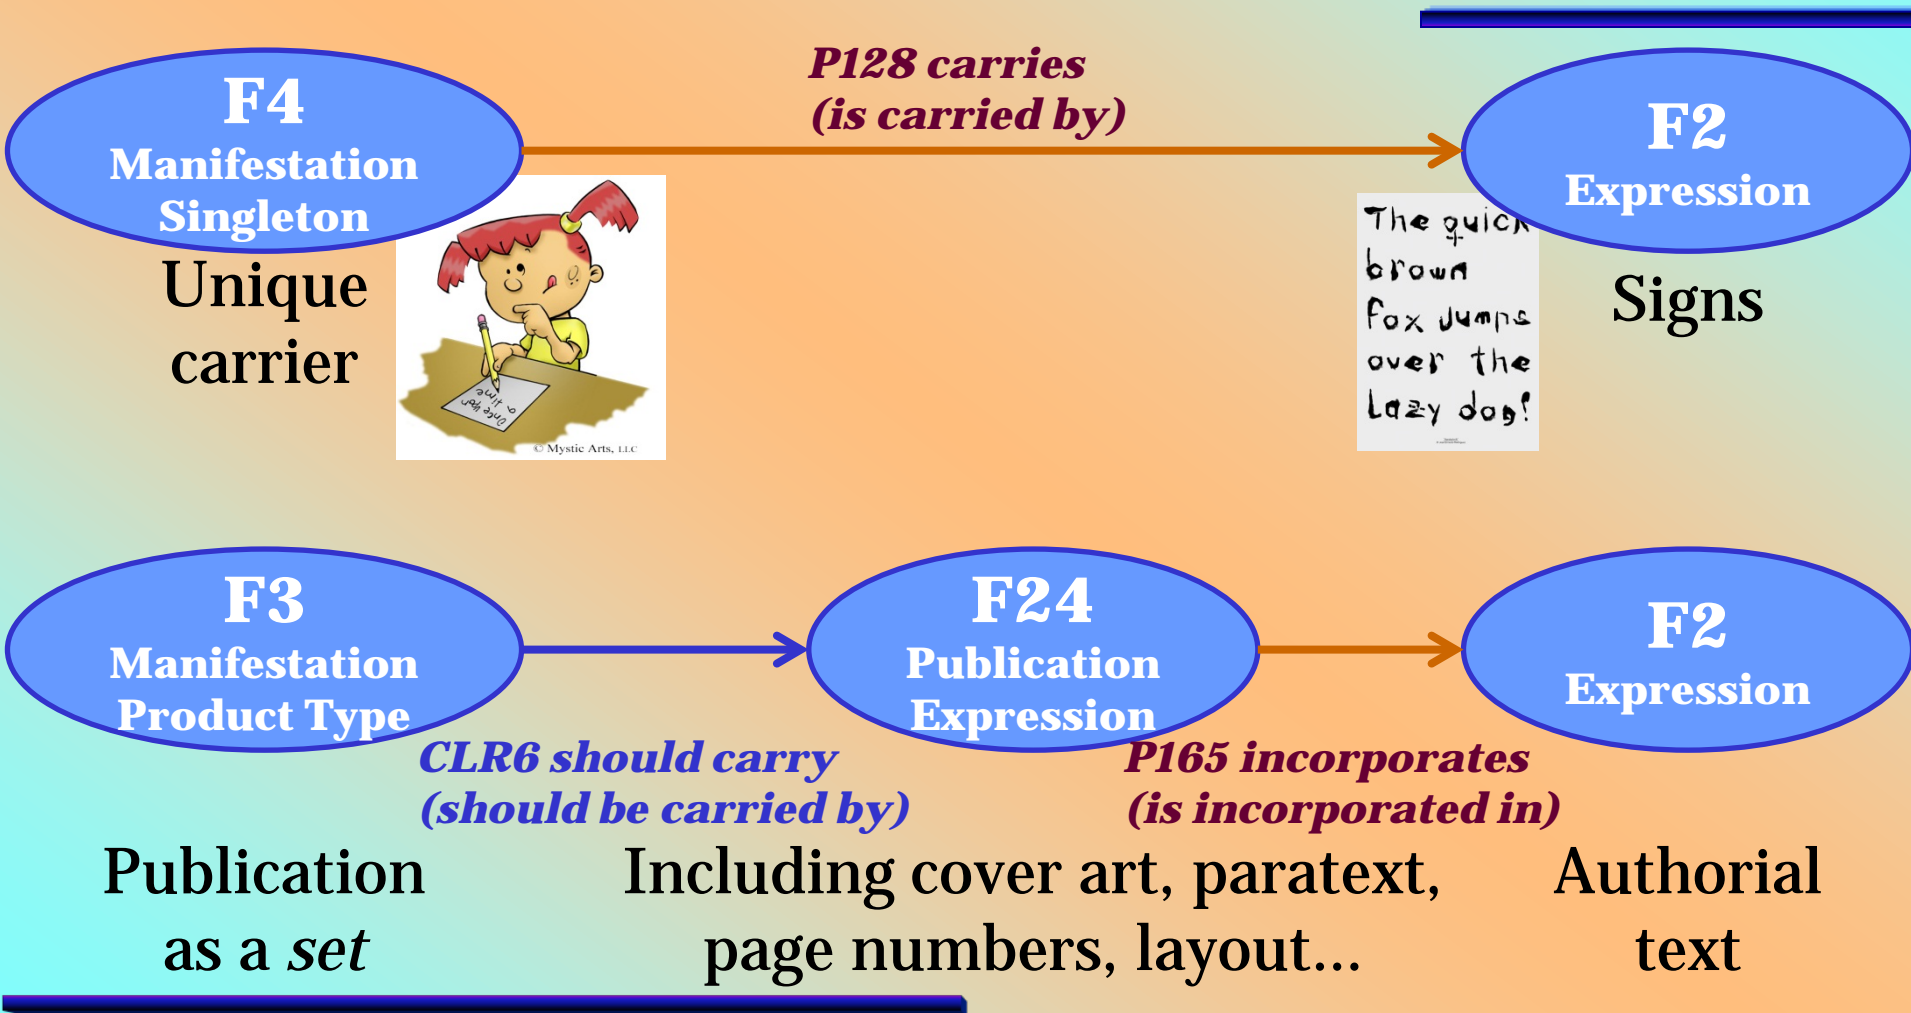

‘Expression *is embodied in* Manifestation’

---

- Manifestation = a *set* of physical carriers
    - A set may have 1 element (‘singleton’)
  - Expression: which one?
    - Authorial expression? Publisher’s expression?
-

# 'Expression *is embodied in* Manifestation'

‘Manifestation *is exemplified by* Item’

---

- Unique carriers:  is both Manifestation and Item

- Digital publishing:   
(no instance of F3 Manifestation Product Type)

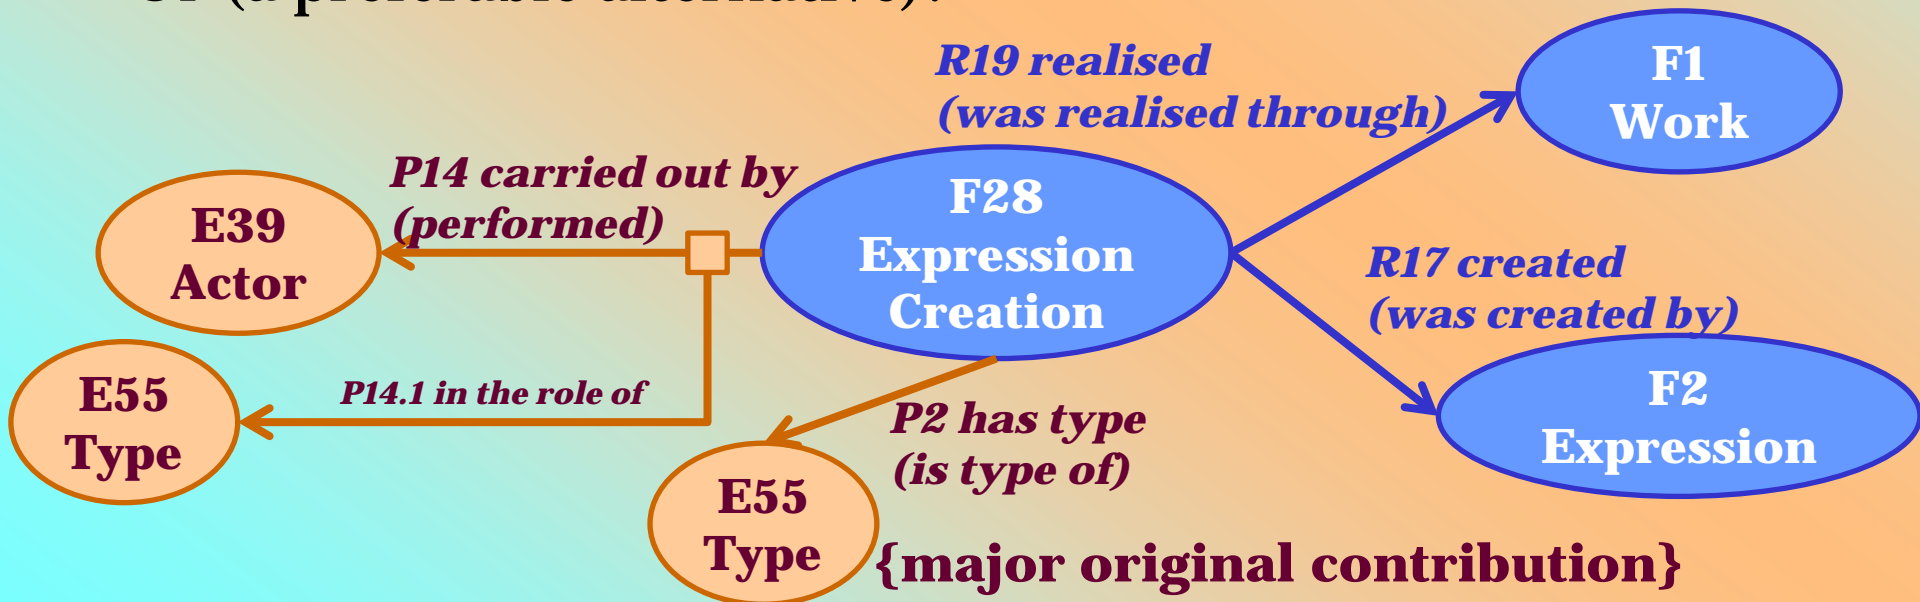

- Traditional publishing: 
-

# Group 1-to-Group 2 relationships

- ‘*Work is created by* (Person, Family, Corporate Body)’  
‘*Expression is realized by* (Person, Family, Corporate Body)’

- Or (a preferable alternative):

# Group 1-to-Group 2 relationships

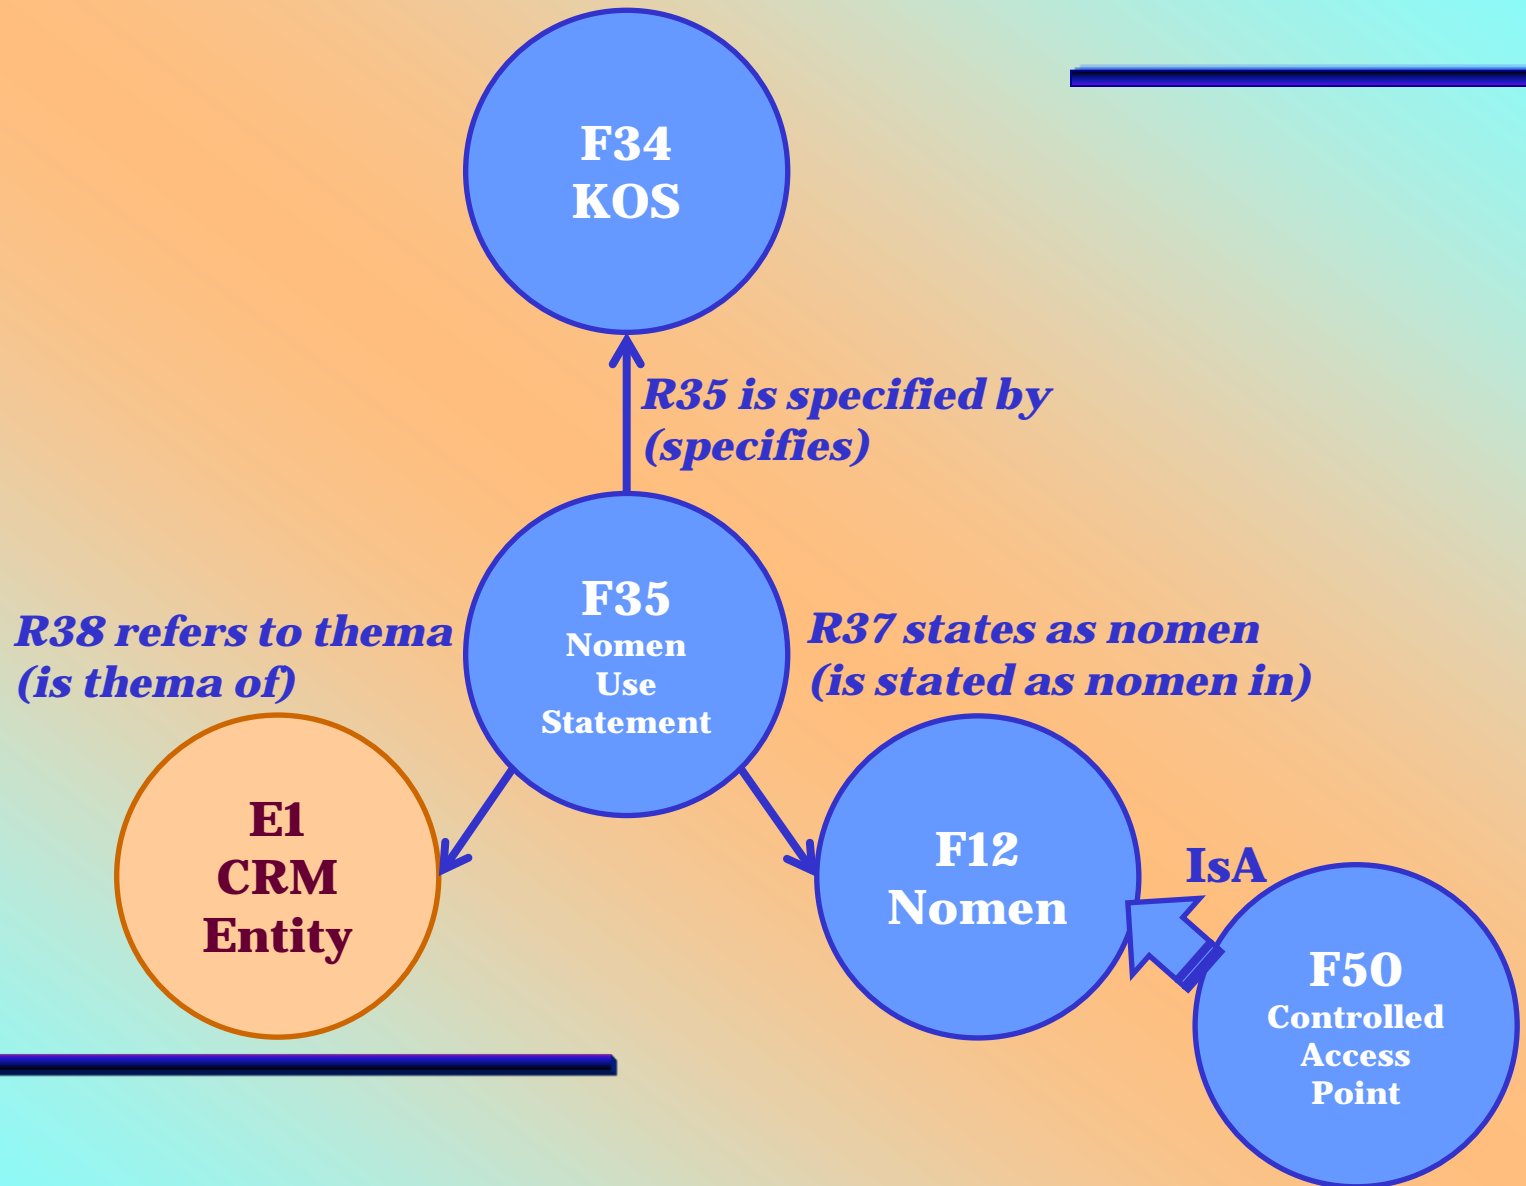

- ‘Manifestation *is produced by* (Person, Family, Corporate Body)’

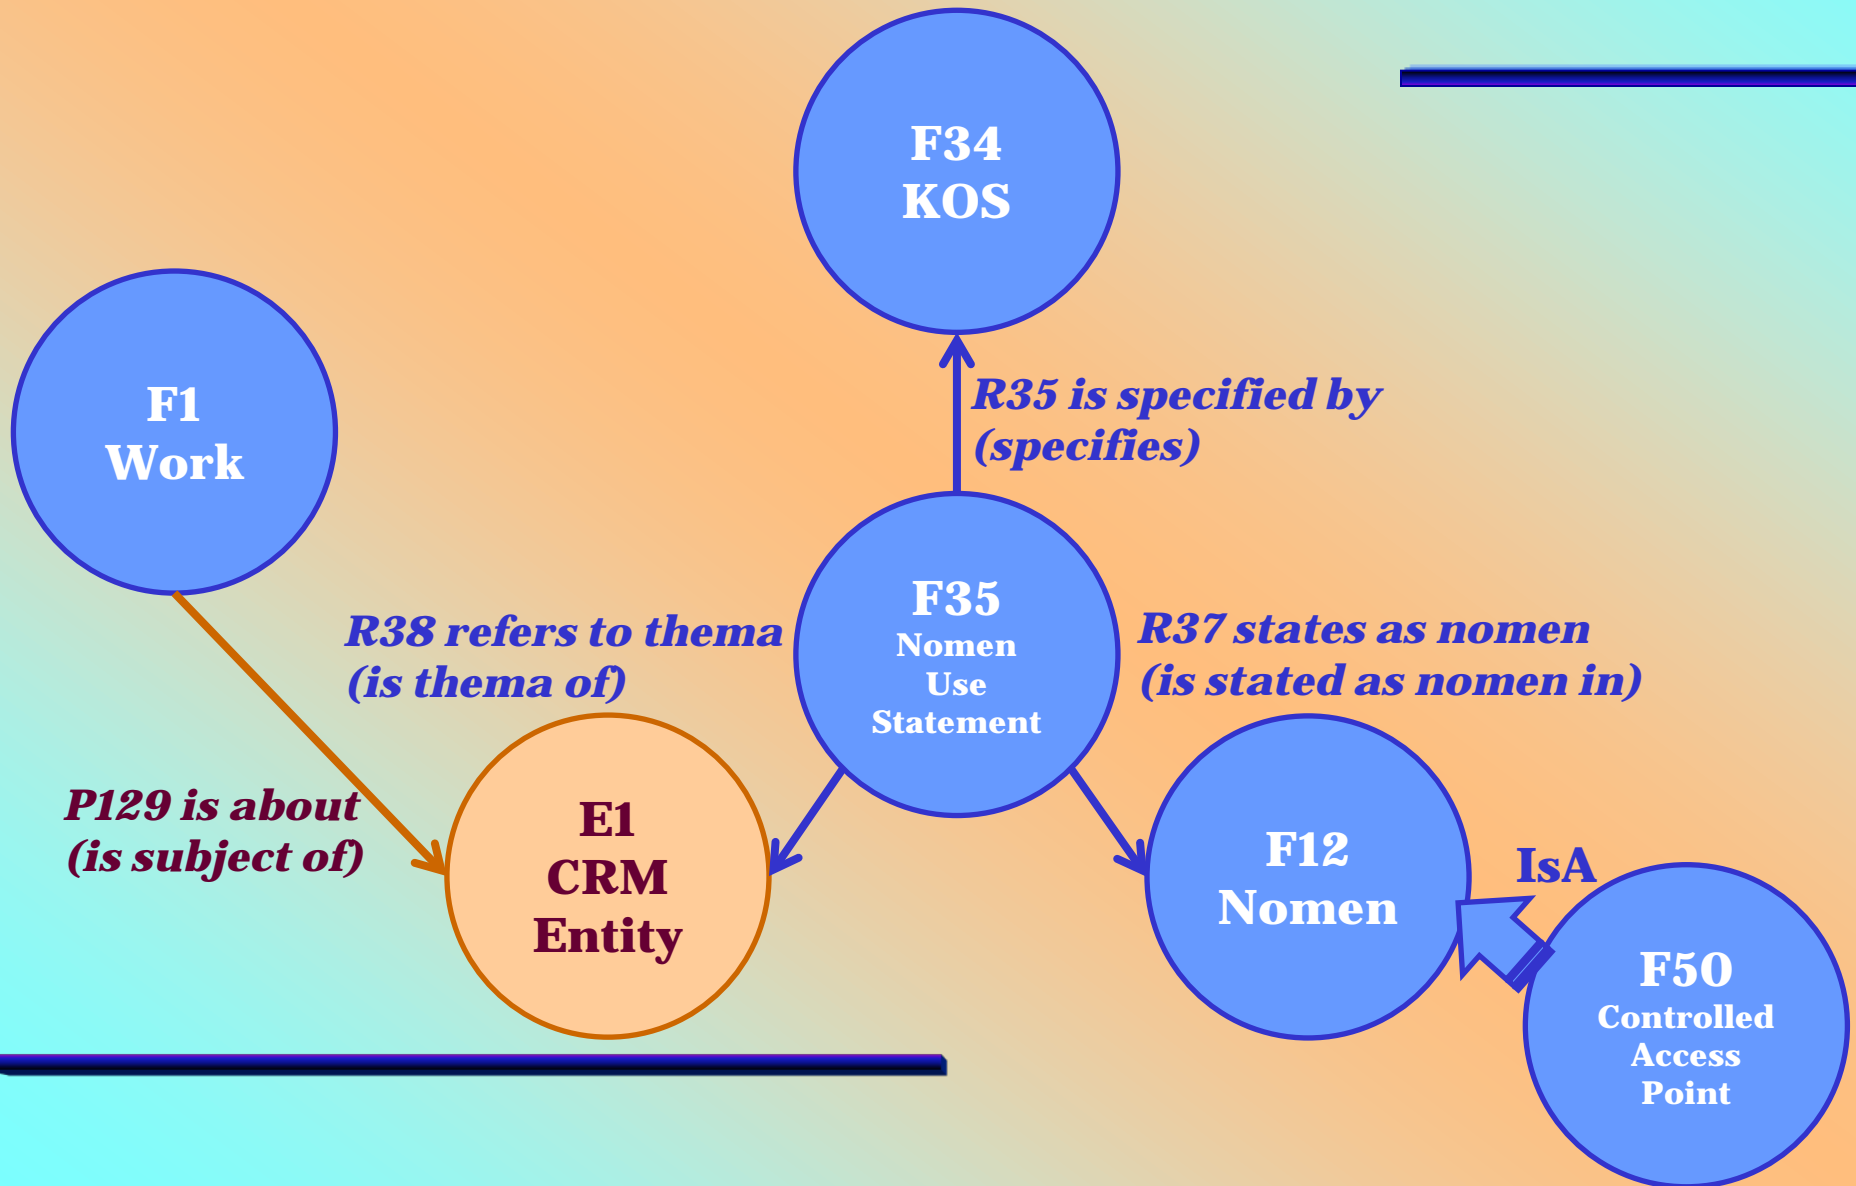

- ‘Item *is owned by* (Person, Family, Corporate Body)’

# Authorities

# Aboutness

# CONCLUSION AND FURTHER DEVELOPMENTS

---

# Conclusion and further developments

- **DON'T PANIC!!!**

- CIDOC CRM, FRBR<sub>00</sub>, PRESS<sub>00</sub> are not 'complicated'...
- ... they're just *semantically rich!*
- You don't have to use *all* classes and properties... just pick the right ones for you!
- Or wait for our 'core' version (2016/2017)
